It's the most time of the year

Heins Sight...

By Tamra Heins, Editor

Let's hope the roads stay clear, the prices STAY
HIGH and the lunch is cooked to

perfection

HAPPY NEW YEAR! While some may say Christmas is the most wonderful time of year, I think Bull Sale Season is the best. In this issue, you will see the thousands of Simmental bulls and females for sale in the upper Midwest this season. Thank you to those you who invest your marketing dollars in this publication.

In this issue, my two worlds collide with the story about the Quandt Brothers.

BULL SALE SEASON

One of the many contracts I have is serving as the State Executive Director of the ND Pork Council. This will be my tenth year in that position. I have learned a lot about the pig business and have spent the last ten years trying to help expand that industry in North Dakota. When the Quandt family, with no pig production experience, wanted to put up four finishing barns in

southeastern North Dakota, I was ecstatic. It was exciting for me that a North Dakota farmer wanted to diversify with pigs. I knew they had Simmental cattle, but I didn't know what a diverse and interesting farm they had until I started to attend permit hearings with the Quandt family. I was impressed with the sheer number of family members that work together every day and wanted to learn more about the history of their operation and maybe their secret to keeping it together through the generations. I hope you enjoy.

The podcast series highlights The Genuine JHB podcast, if you are looking for a new one to start listening to and like variety with a lot of livestock thrown in, I think this might be the one for you.

Highlights from the ND and SD Simmental Association Annual Meetings and Banquets are always a January feature. I appreciate everyone who sacrifices their time to sit on a board for their respective industry. It's not always easy – and the pay is not too great – but thank you to those who make the time.

Good luck this sale season. Let's hope the roads stay clear, the prices stay high and the lunch is cooked to perfection.

Enjoy the Day!

Bull & Female Sale

HIGHLIGHTS FROM THE SOUTH DAKOTA SIMMENTAL ASSOCIATION SALE, ANNUAL MEETING AND AWARDS BANQUET

Mobridge Livestock Market was awarded the SD Simmental Association Promoter of the Year Award. Mobridge Livestock Market, Mobridge, SD is locally owned by Jason Anderberg, Tigh Anderberg, and Casey Perman. The SD Simmental Association honored this business because of their work to promote Simmental and Simmental Influenced cattle through the years by advertising special breed sales and working with buyers to identify those genetics when they come into their sale barn. Thank you to Mobridge Livestock for your work for SD Simmental breeders.

The SD Simmental Association elected new board of directors at their Annual Meeting and Banquet. Tyrell Mitchell and Tom Harris joined the board this year. Bridgett Twedt was elected to be the new President and Kevin Blagg serves as Treasurer. Pictured, left to right, Jeremy Lehrman, Tyrell Mitchell, Kevin Blagg, Bridget Twedt, Brett Tostenson, Tom Harris and Mike Thyen.

SD Highlights, Cont'd from pg 8

The SD Simmental Association awarded two \$500 Scholarships at the Annual Awards Banquet. The recipients had to write an essay titled "Why Simmental?" This year's winners were Cassandra Twedt (pictured at right) and Kenidey Effling (not pictured).

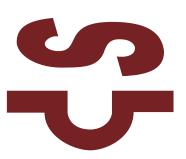

The SD Junior Simmental Association awarded \$500 heifer grants to nine juniors during the SD Simmental Annual Awards Banquet. The money for the grants is made possible through generous donations by Martin-Trudeau Insurance. This grant can be used to purchase any open or bred heifer offered for sale in one of the SD Simmental Association sponsored sales. Heifer grant recipients are (L to R) Cassandra Twedt, Jade Twedt, Harper Duxbury, Barret Buus, Chesney Fuks, Natalie Marshall and Aaron Haman, as well as (not pictured) Taten Twedt and Madison Dragt.

The Fallen Friends Buckle is given to a SD Junior Simmental Association member who has excelled in many parts of the association throughout their junior career. This year's award winner is Lindsey VanderWall, Bruce, SD. Vanderwall attends South Dakota State University and is majoring in Ag Education. She has her own herd of registered Simmental and SimAngus cattle and has been active in the junior association over the years. Congratulations to Lindsey.

GORINA CATTLE

SD SIMMENTAL ASSOC. RECOGNIZES GOEKEN CATTLE AS BREEDER OF THE YEAR

By Amy Blum

This year's breeder of the year routinely offer bulls that check all the boxes for function, soundness, and docility. They will celebrate their 43rd annual sale in January 2024, but to really appreciate the cattle this family puts together, you must appreciate the family.

With 750 cows to manage, there is no lack of work. Luckily, that's exactly how John and Susan Goeken like it. John's strong German roots make him believe a 40-hour workday is possible, and Susan's all-around ranching ability coupled with her passion for family and cattle mean those long days are both possible and worth the

effort.

John has always known what he wanted and never been afraid to put in the work to get it. In 1977, he learned AI as a junior in high school and began selling bulls private treaty not long after. He made his best decision when he took enough time off work to marry Susan in 1981. The following year, John and Susan joined forces with Chuck Olson and Dale Werning to offer their Simmental bulls at auction.

Nowadays, customers join the Utica family in Lesterville to take a run at a bull battery influenced by some of the family's greatest investments like ES Buckshot, which he purchased with Kevin Healy, and Yardley High Regard.

Goeken Cattle model the evolution of the Simmental breed, but more

models what it takes to make a go in this industry. With their four kids and nearly 10 grandkids, the Goeken's future remains bright, and the SD Simmental Association is proud to honor the family as our 2023 Breeder of the Year!

ND SIMMENTAL ASSOCIATION NAMES FETTIG FAMILY COMMERCIAL CATTLEMEN OF THE YEAR

By the Fettig Family

The Fettig Farms was established on September 5, 1948, when Benny and Katie Fettig moved from Napoleon, ND and started farming 7 miles north of Tappen, ND. They farmed and raised their family of 10 children for 43 years until moving back to Napoleon in 1991. At that time, Jeffrey Fettig, son of Benny & Katie, and his wife Bonnie Fettig (Gruebele) moved off Bonnie's Father's dairy farm onto the farmstead to take over. They started off raising pigs, 75 head of mixed breed cattle and farming conventionally.

In 1987 Jeff and Bonnie had identical twin boys, Christopher and Cole, who were welcomed into the world with farming and ranching in their blood. As soon as they could, they helped their parents as much as possible.

Eventually the pigs were sold, while Jeff continued to grow the cattle herd

each year by keeping his own heifers. 1996 was a year for change, the family started organic farming, raising mostly flax and wheat and Jeff purchased his first Simmental bull from TNT Simmental Ranch. This gave growth and inspiration for their future productions in farming and ranching.

Due to several years of fighting to find water for the cattle on their farmstead, they decided to purchase and move to the Oscar Sauer farmstead in 2000. After purchasing the farmstead, they were able to increase their herd up to 450 cows, by keeping their own replacement heifers and continuing to buy Simmental bulls. Jeff was pleased with the Simmental genetics and how it was making their herd more productive, the calves were selling heavier each year.

In 2005 Jeff started Aling the heifers

using top-quality Simmental bulls with the help of his neighbor friend, Jon DeKrey. Chris and Cole graduated Steele High School this same year and furthered their studies at Bismarck State College (BSC) for Farm and Ranch Management. They graduated in 2007 and then moved back to the farm to help alongside their father. The boys learned how to AI in college and took over that task of AIing heifers and even a few cows. They continued to AI for a few more years until life got too busy, then they stopped, but buying top-quality Simmental bulls never did.

On February 4, 2015, Jeff lost his life to a massive heart attack while on vacation in Jamaica with Bonnie and neighbors Jon and Julie DeKrey. This tragedy left the farm to Bonnie, Chris, and Cole. The

ND SIMMENTAL ASSOC. NAMES TOURDOTS PROMOTER OF THE YEAR

By Bryan Leapaldt

The 2023 Promoter of the Year goes out to a couple who have been a part of this Simmental event for many years. They also can probably boast having the longest trip to get to it each year! Larry & Michelle Tourdot from Mauston, Wisconson.

They are a 5th generation farm that started in 1868 on Michelle's family farm as a dairy, hogs and sheep. In 1964, they sold the sheep and bought Horned Herefords.

In 1973, they had their first Simmentalcross steer, and in 1974, they built a small feedlot and saw firsthand how fast Simmental grew and finished.

In 1975, the first Simmental female was purchased from Standing Star Ranch of Wyoming. Their ad in the Simmental magazine inspired Michelle for life when it came to Simmental.

In 1980, she bought her first bull while in college (Irish Rover breeding). They always bred for quality, not color and they used Simmentals exclusively. They purchased from various breeders until the early 90's when they started attending the Skillestad/Lassle sale annually.

In 2004, Larry & Michelle were married and she turned him into an addicted Simmental life partner! After the Skillestad dispersal took place, they started attending various sales in ND. They try to purchase 1-2 head annually. They often use ASA reps to help with their purchases, with distance being an issue.

They are still looking for that perfect heifer, just like the rest of us! She must possess good calving ease, udder, feet, disposition, grow like a weed, be polled and most recently must also be black. In other words, they want their cake and to eat it too!

They have a small annual sale near Prairie du Chien at the end of January where they are very strong advocates for the breed. They are always working to educate producers in their area on the value of Simmental genetics by using all the tools made available to them.

Most operations in their area are 15-40 cows, and are family operations involving the husband, wife and kids. The cattle are looked at after work or school. Therefore, quiet, easy to handle, problem free Simmentals are a must in their area! They have attended many ASA educational meetings and ND Stockman's events in North Dakota all with the intent of learning more so they can bring it back home to teach their neighbors and to implement in their own operation.

The Tourdots are two of the most genuine people one will ever meet. For example, the first time they purchased a bull or heifer from Bryan Leapaldt, they sent him a thank you basket! Then a few years back, Erika Kenner purchased a heifer from them – a pick of their cow herd out of a sale in Minnesota. When Erika was at their place to pick the heifer – she picked a bred heifer. They asked her

Pictured (L to R): Bryan Lapaldt, Michelle & Larry Tourdot

if she would have picked something in the open heifer pen, what would it have been? Erika figured they were wondering what her favorite was just so they'd know. Erika took off for home as they had already arranged to deliver the heifer after getting the health papers done. When they arrived in Leeds a little while later, they surprised Erika and had brought along an extra! That open heifer she liked! They said they felt she had paid too much for the pick, so they gave her the open as a bonus!

They are truly a part of the ND Simmental family, even though they are from Wisconsin. Congratulations Larry & Michelle!

Fettigs, Cont'd from Page 14

farmstead to this day is operated the same as Jeff would want it to be, still purchasing high quality bulls and keeping a closed herd by raising replacement heifers.

The Fettig Farms has now grown to 650 head operation with the calves being weaned October 1st and backgrounded for approximately 60 days. Heifers start calving February 15th on a 45-day calving period and cows start March 5th, on a 60-day calving period.

Fettig Farms has thrived from buying high performance Simmental bulls. Not only have their weaning weights increased but also the performance on feed has drastically increased over the years. The cows' performance continues to get better and better each year too. In recent years, most of the Fettig Farms genetics has come from numerous top breeders in the state.

Fettig Farms is currently owned and operated by Bonnie Fettig, her sons Chris

and Cole and their families. Chris, his wife, Emy, and their children Jordyn (15), Jase (7), and Jaxtyn (5) live just five miles from the farmstead. Cole, his wife, Stacie, and their boys Ty (5) and Levi (3) live next door to the farmstead. If there is a Simmental bull sale in the area it is more than likely you will run into Chris or Cole or both - always out looking for that one bull that will make their herd a little better.

Congratulations to the Fettig Family of Fettig Farms!

www.ellingsonsimmentals.com or www.simmental.org

Gerald "Butch" Haugland was raised on the family farm near Crosby, ND. Butch had a deep love for cattle and horses that began early on in his life. He was born with an entrepreneurial spirit and early on he wanted to have his own cattle business. Butch purchased his first group of cows from a producer near Fortuna, ND. He enjoyed showing, judging and selecting cattle. Butch graduated from NDSU with a degree in agricultural education and after he and Diane were married, came back to Divide County and began to grow their ranch and their family. Butch became passionate about Simmental genetics, appreciating the maternal and growth traits of the breed and started a purebred operation.

He and friend, Jorden Krecklau, another Simmental breeder from Divide County, were part of the NW Simmental group early on and they sold their purebred Simmental bulls in Glendive, Mont., then Baker, Mont., and Bowman, ND, for years.

Butch became an auctioneer and spent over 35 years selling cattle at production sales. Whether on a producer's farm or at the sale barn, Butch was right at home visiting with ranchers and selling cattle.

At home, Butch loved catching the

18

horses, loading up the family in the single cab pickup and driving out to the pasture to check the cows. He and the family would also drive the cows home in the fall. Butch loved being a cowboy.

Butch strived for continual improvement and was passionate about the beef industry and the Simmental association. He played a key role in selecting and promoting the cattle that would be sold at the NWSS sale annually. He utilized artificial insemination early on in his own operation to improve the genetic traits he was selecting for.

He was also committed to the future of our industry by helping kids get started in 4H and FFA with their livestock shows being of utmost importance. Butch would often be seen at the fair helping a kid fit their show steer or giving a word of encouragement before a kid entered the show ring. Butch served on the North Dakota State Fair board for years where he was an advocate for agriculture and a board member who wanted to grow and

improve

things for the future.

Many producers, like his good friend Lyndon Hoiby, can recall times where Butch helped them or gave them advice or encouragement to pursue their passions.

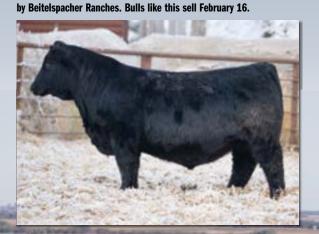

Butch had a big personality and he was a "go big or go home" kind of guy. He said what he meant and meant what he said. He taught his kids and grandkids the importance of never letting go of the rope when leading a show steer or never letting go of the rope when times in life got tough. Butch was a passionate fighter and fought an impressive battle with cancer for three years, all the while he never let go of the rope and kept hope and faith. Although

he left us this last year, his life
impacted many in and out of the
Simmental industry and we
were blessed to know him.

R&R CATTLE COMPANY

This is what our program If this is important to you be there on sale day.

involved in the cattle industry. It first started when Dora Sleeter who was born in Germany in 1861 traveled to the United States at the age of 22. Then in 1883 she homesteaded the S/W ¼ of a field by where our main farm is located today. She then went on to marry Ernest Washner in 1888, who was the local blacksmith for the city of Guelph and Ludden. There Daughter Edith continued to farm and ranch and married Christopher Quandt in 1928 and had five children. Walter went on to continue farming and ranching and married Bernie Super in 1957. They had

John, Mike, Susan, Jeff, Anne, Kathy, Jim and Jason. All five boys continued to farm and ranch together, and expanding the operation to what it is today. They passed on the operation to the current generation which involves Jason, John's three sons, Justin, Nathan, and Stephen, and Jason's oldest son Gabe.

How many years have you had a bull sale?

This year marks our 12th annual bull sale. We first got started in Simmental seed stock 15 years ago when Jason started Artificially inseminating our commercial herd to purebred Simmental bulls. He also purchased purebred breed bulls and cows while utilizing embryo work to grow the herd to what it is today.

Quandts, Cont'd from Page 20

What was the hardest part to start having a bull sale?

I think the hardest part to starting a bull sale is growing your customer base and getting your name out there. Advancing one's genetics and riding the highs and lows in the bull sale and cattle industry.

What would be your advice to someone who is just starting out in the Simmental Seedstock business?

Pick your direction of what type and kind of cattle you want and stick with it. Treat your customer's really well. Quality over Quantity.

Tell me about Gabe's involvement and decision to be part of Quandt Cattle Co?

Gabe has always had an interest in cattle. He was my right-hand man and traveled many miles to purchase purebred cattle and to attend bull sales. Gabe took a liking for sales like the ND State Simmental Sale and typically would pick out great quality bred heifers that he used to grow his own personal herd. He had many cows that he used as flush cows that further expanded Quandt Cattle Co's good genetics. Gabe has a really good eye for cattle and he has a real knack for people. He enjoys working the day to day but also getting a chance to visit with fellow producers. Gabe manages a majority of the breeding decisions, AI, and managing the herd work process. I give a lot of credit to him for where our operation is today and am grateful to have him as a partner in Quandt Farm and Cattle Co.

Can you give me some background on who is involved and what their job description is?

John, Mike, and Jeff have retired from our farming partnership (Quandt Brothers) but are still greatly involved and help out a lot during or peak seasons. Jim is still actively farming with Quandt Farms and is our amazing farm mechanic, he can literally fix anything. Jason manages the farms employees (he's the straw boss) and Gabe manages the cattle operation along with Jason and helps out in all other farm entities form planting, spraying, combing, and the hog operation. Justin manages the planting and fertilizing decision along with directing all the irrigation work.

Nathan manages the drain tiling, spraying/ chemical and is our shop foreman. Stephen manages the hog operation along with doing a large majority of the bookkeeping. With all that being said, each member of our partnership is active and always willing to help with every portion of our farming operation. I truly believe this is what has made our farm so successful for so long.

I find it fascinating that you have such a large family that all work together on a diverse operation. What do you think your family does at Quandt Brothers that makes that possible?

I feel that throughout the generations, we've been taught the importance of family and the value of respecting one another. Even in hard times and disagreements, we've found a way to come to common ground to drive this operation in the proper direction. We've always been future focused and have strived to make it better for the next generation of Quandts. No matter if it's for my children or my nephew children, we want this farming operation to be here for the next 140 years.

Diversified farming operations are kind of a thing of the past? Why is diversification important to Quandt Brothers?

Diversification is key to a large multifamily farm. Again, we are future driven, always looking at what it will take to make this farm be sustainable for our future generations to farm. We know that agriculture alone won't be able to do that, so cattle and hogs are other main sources of income for our families. We will always look at other avenues to diversify as well as ways that we can become more selfsufficient.

A few years ago, Quandt Brothers added pigs to your operation?

We decided to do it because it was a way to expand without having to buy expensive land. It is going well, 3 years down, 7 more to go. We have learned a lot about pigs and the barns over the course of the past three years. It has been a learning

Quandts, Cont'd from Page 22

curve for sure but there is a lot of good people in the swine industry who are quick to offer great advice.

What surprised you the most as a cattleman, about the pig enterprise?

The genetics of hogs evolves so much faster than cattle. You won't see the full effects of the genetics you pick in cattle for up to eight years, where in pigs you see them in two years.

What is the biggest benefit of having a pig farm in your diversified operation?

The Diversification was a way for us to keep investing in the farm without the major negative cash flow impact that buying land right now has. I expect it to be one of the many pillars of our farm someday. Also the manure is very promising to help cut down on our fertilizer inputs and is a rounded source of nutrients for our crops.

What is the biggest negative of the pig farm?

The toughest part of being a part of the swine industry is learning how pigs work. It was totally new to us. We're also still learning every day. Having good people around helped us make things easier. It's another operation to manage and keep track of but there isn't a whole lot of negatives.

Your family serves on many boards, Justin on the Corn Board, Stephen on the Pork Board, and you on the Simmental

Board. How do you make time for that and why do you think it is important?

Since, our operation is larger scale and we have highly dependable staff, we are able to take time away for the day-to-day operation to be involved in these boards. Our end goal is to have a better basis for corn and soy beans so we try to advocate for different identities that use corn and soybeans as an end product. We truly see the importance of making time for board such as these as they have a critical impact on our industries.

What are the biggest challenges you see in the beef industry in the next five years?

I see a lot of family ranches slipping away as the current generations are retiring and the next are not choosing to take them over. We are losing an amazing generation of cattleman that have years and years of experience and knowledge in the industry.

How do you think the Simmental breed is equipped to meet those challenges?

I believe the Simmental breed can meet any challenge that is set before it. I do have concerns about our emphasis on one mult-trait epd that leaves out other important epd's like weaning weight, yearling weight, milk, fertility and docility. These traits have generationally made the Simmental breed a sustainable one. The end result for commercial cattlemen is that they are paid by the pound. The Simmental breed has all the capabilities of meeting these challenges if we can find common ground in these traits. At Quandt Cattle, we truly believe we will keep this breed a successful one for future generations.

GENUINE JBH PODCAST FEATURES LIVESTOCK PHTOGRAPHY TIPS AND MORE

By Tamra Heins, editor

Our featured podcast for January is The Genuine JBH, The Bradcast, hosted by J Bradley Hook. While many know Brad Hook as a livestock photographer or consider him a pioneer in the show cattle industry, his podcast involves many different topics. Episode content can range anywhere from the challenges of livestock photography to a more personal look at Hook's own health.

Forty years in any industry will give one plenty to talk about. In the cattle industry, if you combine the personalities you meet and those experiences you have along the way, the opportunities to create entertaining episodes is endless. The popularity of these episodes is evident with The Genuine JBH Podcast episodes are nearing two million listeners.

The podcast has been going on for about three years, Hook said when he first started, his intent was to produce one a week, but this proved to be very stressful. Hook explains, "It takes about 24 hours to produce a one-hour

podcast." Hook admits there are things he could do to make it less labor intensive but says he wants to produce a high-quality kind of podcast that he, himself would like to listen to.

"People like to hear a good story. And good people that are good at what they do, within their own industry makes a good podcast, stated Hook. He has since changed his attitude about weekly episodes for self-preservation. Hook now subscribes to a newly created mantra of "You get what you get, when you get it, but it will be good."

This podcast is not just about cattle or photography. Episodes routinely feature interviews with trendsetters and legends in the livestock industry from all species. Some episodes include first hand accounts of historical moments in agriculture like the "farm crisis of the 80's" or as recent as the heat catastrophe in Kansas feedyards in 2022.

JBH Podcast, Cont'd from Page 26

Reminiscing about how the industry has changed throughout the years as online sales and social media have changed how we buy and sell livestock appeals to many, "But not to everyone." Hook adds.

Episodes of Hook's own health issues from dealing with weight loss drugs to undergoing open-heart surgery this summer, he is not afraid to share what he's learned to try and help others. His ability to share personal stories only make his episodes more interesting and his followers anxiously waiting for the next episode to drop.

The podcast has opened up marketing opportunities for Hook and his team. His team includes his daughter, Sage and son, Drake along with other very talented marketing professionals such as Taylor Durst and Lakyn Lind. Hook and his

wife of more than 30 years, Shawn, is also occasionally the subject matter. One episode provided a light-hearted look at the effect of the social media platform "Pinterest" has on home improvement projects.

The Brand Champion Marketing
Network is another aspect of the podcast
that gives new and specific marketing
tools for clients. Time slots can be
purchased where a client can talk more in
depth about a product, service or event.
It is also a format where testimonials
can be used to interact with a

target audience. Time slots can be from 15 minutes to 60 minutes. Hook has clients that use the podcast only as their only marketing tool and have had enormous success doing so.

When asked what surprised him the most when he got into the podcast world Hook, at first didn't have much to say, but eventually he asked if he could answer that question. Hook explained, "The biggest surprise I had about this venture is all the people that listen. When I was in the hospital for my heart surgery, the

response was overwhelming with thousands of followers wishing him well on his surgery and his recovery. Hook said, "It was unreal. That really motivated me to want to keep doing them."

WINTER MANAGEMENT OF HERD BULLS

By Madison Kovarna, SDSU Extension Beef Nutrition Field Specialist

Bulls are often a part of the cow herd that slips through the cracks during the winter months as breeding seasons come to a close. All things considered, the working season for a herd bull is relatively short, with an active breeding season of 60 to 90 days for most producers. When winter weather moves in, and the bulls are pulled from the cow herd, it is imperative to manage herd bulls properly to prevent frostbite of the testes and properly manage body condition score before the next breeding season. Bull management strategies during the winter months can impact a bull's performance in the upcoming breeding season.

Frostibte

Frostbite presents as a scab, discoloration, and/or sloughing of the bull's scrotum. These tissue damages limit or prevent the ability for a bull to regulate testis temperature. This is caused by the inhibition of the raising and lowering of the testes that occurs naturally. Come breeding season, this can result in a decrease in fertility. Dry areas to lay are important to consider when wintering bulls. These areas can be achieved by providing bedding or areas within a pasture that provide adequate cover from wind and snow. Wet and cold conditions increase the risk of frostbite.

Nutrition

Nutrition of bulls depends on a variety of factors, including age and weight loss that occurred over the breeding season. Mature bulls that are in good condition following breeding season can be managed on pasture or an all-forage diet without supplementation, as long as the forage contains 8 to 10 percent crude protein and is available daily at 2 percent of body weight. Yearling bulls following their first breeding season are still growing and require more energy and nutrients regardless of

Frostbite					
TABLE 1. EFFECTS OF FROSTBITE SEVERITY ON SEMEN QUALITY					
	FROSTBITE SEVERITY				
Breeding Soundness Score	Mild	Moderate	Severe		
Satisfactory, %	89.5	48.0	2.1		
Questionable, %	9.5	25.3	9.2		
Unsatisfactory, %	1.0	26.7	88.7		

Table 1 illustrates the effect of frostbite severity of semen quality. Adapted from G. Lardy, North Dakota State University

condition when compared to mature bulls. A ration developed for young bulls should target an average daily gain of 1.5 to 2.0 pounds dependent on weight lost during the breeding season. A diet crude protein of 10 to 11 percent should be targeted for young bulls. Regardless of diet available and the age of the bull, a good vitamin and mineral program should be followed.

Body Condition Score

At the beginning of the breeding season, ideally bulls should have a body condition score (abbreviated as BCS) of 6. This BCS allows for bulls to lose some weight during the breeding season without negatively impacting sperm quality. It is common for bulls to lose 100 to 200 pounds over the breeding season. In contrast, over-conditioned bulls are not able to efficiently do their job of breeding cows. At higher body condition scores,

Bulls should be housed in a pen large enough to allow for adequate exercise.

Herd Bulls, Cont'd from Page 34

fat deposition within the scrotum increases, resulting in poorer thermoregulation of the testes. This reduction in temperature regulation decreases overall sperm quality. To prevent last-minute efforts to improve condition score, producers should evaluate their bull's BCS 90 to 120 days prior to turnout to provide adequate time to improve or decrease body condition if necessary.

HOUSING AND EXERCISE

Bulls should be housed in a pen large enough to allow for adequate exercise. Additionally, a large pen allows for the less-dominant bulls to move away from more-dominant bulls. Bulls will fight to determine social ranking; however, providing space for animals to get away from each other may reduce injuries. If bulls are being fed at the same time, 24 to 30 inches of feeder space should be provided per head to allow access for all animals and lessen incidences of fighting. It is important to provide room for exercise to keep bulls in shape for the next breeding season. If proper exercise is not permitted, bulls can lose their endurance and struggle to keep up in the beginning of the breeding season, resulting in a potential reduction of cows bred during the beginning of the season. Exercise can be encouraged by placing feed and water on opposite ends of the pasture. Ideally, the winter housing area would be located away from cows to allow bulls to fully focus on eating and other behaviors rather than breeding cows.

FEEDING CORN SILAGE TO CATTLE CAN ADD VALUE

CORN SILAGE COULD MAKE UP 40% TO 60% OF DIET DRY MATTER AND STILL BE ECONOMICAL.

By now, corn silage harvest has finished across North Dakota. In well-packed, covered corn silage piles, the fermentation process to preserve the silage will be complete after about three weeks. This means that most of this year's silage crop is ready to feed to cattle. While ranchers may be able to calculate the input costs or the price of selling the corn silage to another producer, it pays to consider the value of feeding corn silage to their own cattle.

"Corn silage has significant value for cow-calf, backgrounding and feedlot operations," says Zac Carlson, North Dakota State University Extension beef cattle specialist. "Silage is an excellent energy source, providing digestible fiber while improving the palatability and conditioning of the diet with added moisture."

The tonnage of corn silage harvested and cattle inventory throughout the year often dictate the inclusion level in backgrounding and finishing diets. A survey of farmers and ranchers of the Northern Plains and Midwest reported that the average inclusion of corn silage on a dry matter basis was between 17.1% and 22.2% in backgrounding diets and between 5.4% and 11.4% in finishing diets. However, a summary by the University of Minnesota suggested that corn silage could make up 40% to 60% of diet dry matter and still be economical.

A summary of five experiments by the

University of Nebraska evaluated the inclusion of 15% or 45% dry matter corn silage in finishing beef cattle diets. They reported that cattle consumed the same amount of feed dry matter regardless of corn silage inclusion level, but cattle fed 45% corn silage gained 0.2 pound less per day, leading to a 6% poorer feed conversion than cattle fed 15% corn silage.

Corn prices have generally been more expensive in the past few years. Replacing a larger portion of corn in beef cattle diets with corn silage may be an economical solution. However, cattle may need to be

Silage, Cont'd on Page 50

Silage, Cont'd from Page 46

fed longer and to heavier weights to reach similar carcass endpoints.

"These decisions should be evaluated as the value of gain versus the cost of gain," says Karl Hoppe, NDSU Extension livestock systems specialists. "The economics can get complicated and should be evaluated by each individual operation."

As with all feeds, managing corn silage to minimize shrink is critical.

"Depending on the storage structure you are using, corn silage should be harvested at 65% to 70% moisture for optimum results," Hoppe says.

Moisture levels that are too low result in less favorable fermentation and poor packing characteristics in the silage, whereas moisture levels that are too high result in silage that has greater effluent losses (loss of nutrients in the water that oozes from the pile). High moisture levels also can result in a "sour" fermentation.

Hoppe also advises packing the silage correctly to ensure oxygen is driven out.

Excluding oxygen is a very important aspect of making good-quality silage.

Adequate packing involves a number of factors, including the correct chop length for a particular silage crop and having the appropriately-sized tractor for the amount of silage being placed in the pile. Because wheeled tractors exert more pressure per square inch than crawler or track-type tractors, wheeled tractors are preferred for packing silage.

Poorly managed corn silage that spoils will lose dry matter, requiring the cattle feeder to use additional feed resources to account for lost feed. Making and feeding silage affects shrink, including dry matter at harvest, chop lengths, bunker or drive-over pile filling and packing, inoculation, covering, and feedout.

"Most producers realize the potential benefits of covering silage bunkers and drive-over piles to reduce dry-matter losses and spoilage," says James Rogers, NDSU Extension forage crops production specialist. "Reasons corn silage bunkers and piles are left uncovered usually include a lack of adequate labor and available time for the task. However, often forgotten is the practice of discarding spoiled silage during feedout. This step is critical when evaluating the feeding value of your silage and the cattle's performance."

Only a few studies have evaluated the effects of feeding spoiled silage to cattle. A study by Whitlock and others in 2000 at Kansas State University measured the effect of feeding surface-spoiled (black slime and gray mold material) corn silage to beef cattle. Adding spoiled corn silage to the diet depressed dry-matter intake and decreased crude protein digestibility. Similarly, dry-matter and fiber digestibility decreased with feeding spoiled silage.

"If there is one thing you remember, don't feed spoiled silage," Carlson says. "Even if you think the small amount of spoiled silage will be diluted in the diet, it may cost you more than you know."

THE AMERICAN SIMMENTAL ASSOCIATION WELCOMES DR. KEN ODDE AS A SIMSPECIALIST

Dr. Ken Odde

The American Simmental Association (ASA) is fortunate to have a team of beef industry professionals, with a wide variety of experience, available to represent the

Simmental breed. The ASA Educational Specialists or "SimSpecialists" team covers the US attending sales, presenting at educational events, and serving as a resource for seedstock and commercial breeders alike.

Many of the SimSpecialists have storied histories working around the country in all aspects of the beef industry — we have nutritionists and reproductive physiologists, all the way to meat scientists on the team. Many are professional educators, and all are well-known throughout their state and region for being experts in beef cattle production; however, the team's expertise doesn't come only with retired university faculty. We have folks who ranch full-time and can understand the day-in and day-outs of our membership and the challenges they face.

Recently Dr. Ken Odde was added to the team of SimSpecialists for the North and South Dakota area. Dr Odde is no stranger to the Dakotas and will be an asset to

the Simmental breeders in the Northern Plains. Welcome Dr. Ken Odde

Longtime educator and producer Dr. Ken Odde received a bachelor's in animal science at South Dakota State. After a two-year stint in the US Army as an officer and platoon leader, he received a master's degree in reproductive physiology, a doctorate of veterinary medicine, and a doctorate in physiology at Kansas State University (KSU). Odde taught at Colorado State University for 11 years, conducting research on beef cattle reproduction and health. He then returned to South Dakota, working for Pfizer Animal Health for six years, and AgSpan for three.

Odde joined North Dakota State University in 2003 as head of the animal and range sciences department. He soon became the director of Beef Systems-Center of Excellence, which is a publicprivate partnership designed to grow cattle feeding and processing in North Dakota, In 2007 he became the animal

sciences and industry department head at KSU; Odde recently retired from that role.

In 1996, Odde and his wife, Arlene, purchased land in Pollock, South Dakota, which the family has since grown into a sizable commercial cow-calf operation. Today, they run 500 head of commercial SimAngus cows; Odde's son John manages the ranch. In 2014, the family started an internship program to provide students with cattle experience.

Odde has been involved with the Simmental breed for many years, participating in research, interviews, and industry events, and will be a valuable member of the SimSpecialists team.

Wednesday, February 7, 2024 • 12:30 PM — At the Ranch — Wibaux, MT

Two-year-old heifer

30 Purebreds, 105 SimAngus[™], 15 Angus Sell. 50 are 18-month-old fall-borns, ALL ARE Black and Polled, most are homozygous black and polled.

Sensibly sized and efficent

COW EFFICIENCY AT ITS FINEST:

The basis of any good breeding program is the mother cow. Our motto is: "THE RANCHER COMES FIRST." Every breeding decision we make is to improve our customer's bottom line. BEGGER'S DIAMOND V RANCH provides the perfect blend of COW SENSE, COMMON SENSE and SCIENCE. We know the value of a good mother cow; she must be fertile, efficient and problem-free. She must have the staying power to produce a valuable calf year-after-year on her own, with no extra assistance in the environment mother nature provides. She must possess a low-maintenance, easy-fleshing body type that requires little or no extra input. She has to have a problem-free udder and have a good gentle attitude with a set of feet and legs that will serve her until she exits your program at a ripe old age.

- ❖ We are your source for homozygous black and polled Simmental, SimAngus™, Angus genetics, the top 150 bulls out of 275 sell.
- Many ½ & ¾ brothers sell in volume enabling you to assemble like bred genetics that are predictable and consistent.
- From a program that does the day-to-day work. We calve, feed, and work around our cattle every day, so we know our cows if they become problematic.
 They won't see next year and their only way out is through a packing plant.
- We are straight shooters. We honestly try to answer and meet our customer's questions, needs and concerns.
 Our bulls come with a complete 100% satisfaction warranty. If there is a problem we will make it right.
- We provide free bull keep until April, along with a free breeding soundness exam and free delivery, for the first 500 miles on purchases over \$5,000.
- Every bull walks through the sale ring enabling you to see what you are buying. Some pictures and videos just don't represent cattle as they should.

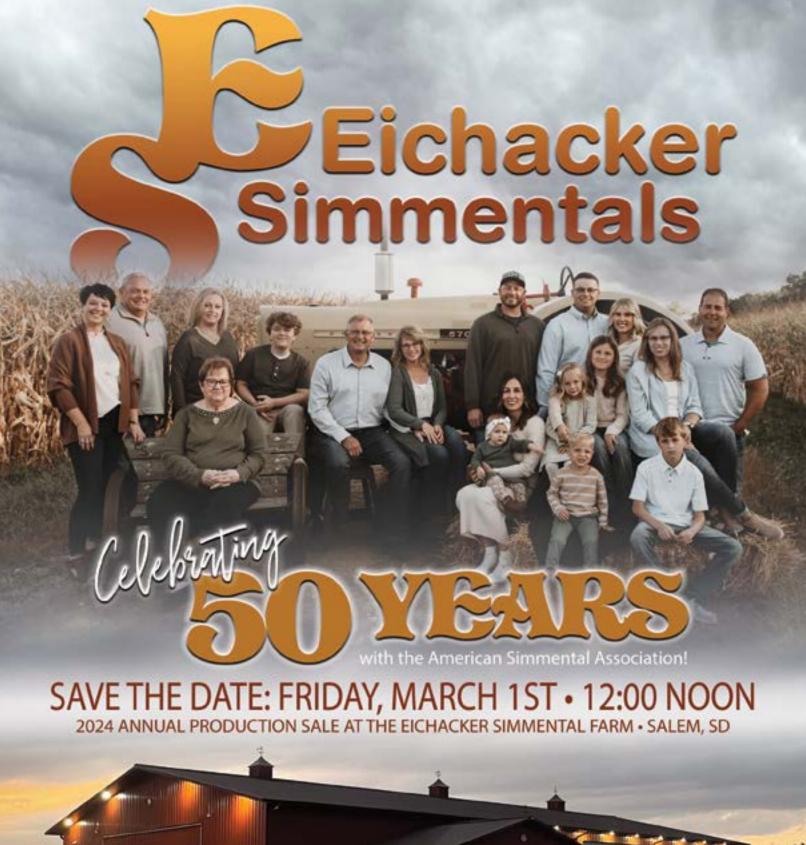

Raising cattle that work for the cow-calf producer, the feeder, and the packer, while providing an enjoyable eating experience for the consumer should be every cattle producer's goal. Ranchers work hard and should expect their cattle to do the same. There are no shortcuts with today's high inputs; your cattle have to be profitable and efficient. Blending EPD and genomic traits requires discipline, common sense, and patience. It doesn't matter how impressive the EPD are or the size of calf at weaning. Cattle that lack efficiency and require extra labor and costly inputs are not desirable. This is why common sense and an experienced eye still play a major role in every breeding decision we make.

EXTREMES ARE EASY TO ACHIEVE. BALANCE TAKES DISCIPLINE, PATIENCE, AND A LIFETIME OF EXPERIENCE TO PERFECT.

IGS GENETIC EVALUATION UPDATES FROM THE IGS SCIENCE TEAM

Reprinted with permission from www.simmental.org

Continuing to improve genetic predictions is one of the main goals of the International Genetic Solutions (IGS) genetic evaluation. Over the last year, several updates to models used in the weekly genetic evaluation have been investigated to be incorporated into the weekly genetic evaluation. As the IGS genetic evaluation has grown and expanded from historical partners, as well as the addition of new partners, the ability to run genetic evaluations within a week's time frame has become difficult. One of the main goals of these updates was to increase the efficiency of evaluations; however, these upgrades are also to maintain or improve the accuracy of prediction of each evaluation. To account for these challenges, three evaluations recently underwent updates, which are detailed below.

Growth Evaluation: The growth evaluation produces EPD for Birth Weight, Weaning Weight, Yearling Weight, Average Daily Gain, Milk, and Maternal Weaning Weight. We updated the way that breed and years are incorporated into the genetic evaluation, and the method used to incorporate information from other genetic evaluations. Previously, breeds and years were incorporated by fitting interactions of these effects for each animal; with the updates, these effects are separated. For the incorporation of information from outside genetic evaluations, IGS will now use a new method that allows for better tracking of the changes that occur to EPD when this information is added to the evaluation.

Carcass Weight and Ribeye Genetic Evaluation: The CW/
REA updates now include the updates described above for the
growth evaluation, as well as updated across-breed adjustments
from the US Meat Animal Research Center (USMARC)
Germplasm Evaluation (GPE) program. This
program helps to determine breed differences
and is an important part of the carcass

evaluations at IGS.

Marbling and Backfat Genetic Evaluations: These updated breed differences will also be applied in the Marbling and Backfat genetic evaluations, which is the third evaluation. The updated across-breed adjustments from USMARC is the only change to the Marbling and Backfat evaluation.

RESULTS OF THE UPDATES TO GENETIC EVALUATIONS

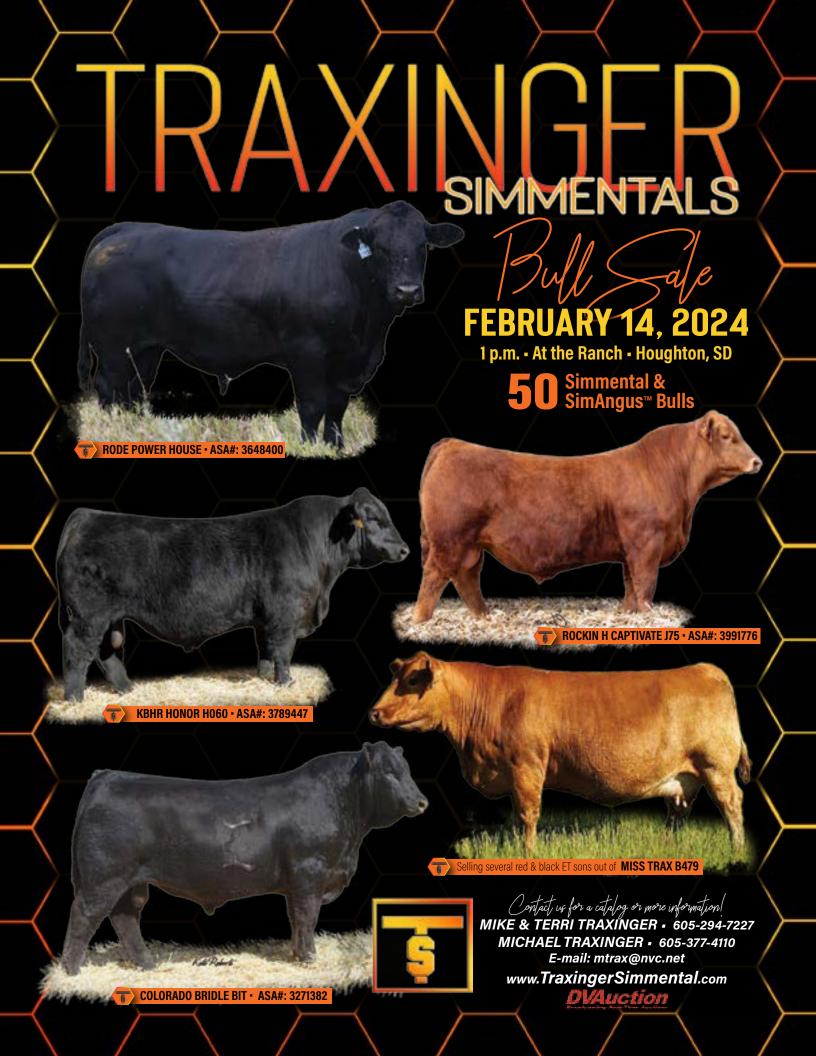

When implementing updates to genetic evaluation, the IGS team undergoes a strict validation procedure to evaluate how potential changes will influence the predictive ability of the updated EPD. One of the most common ways this is done is by excluding a portion of the phenotypes, running an evaluation, and correlating the EPD from this run with the excluded phenotypes. For each of the evaluations, all animals that were born after 1/1/2020 were removed from the evaluation and used to test the predictive ability. The results for these comparisons are included in the table below.

Pearson correlation between parental average EPD and excluded phenotypes from animals in the IGS genetic evaluation that were born in 2020 or later.

Trait	Updated Evaluation	Previous Evaluation
BW	0.57	0.48
WW	0.41	0.39
YW	0.50	0.45
CW	0.16	0.14
REA	0.38	0.36
Marb	0.33	0.33
BF	0.26	0.25

The results in the table above show that the implemented updates had the same or higher correlations than the previously implemented models. This would correspond — in most cases — to more accurate EPD for each of the traits. With the updates, some breeders may notice that the resulting EPD for animals may change, but the percentile rank for the trait may be similar. This is due to differences in estimated breed effects as part of the evaluation. While most traits will have strong EPD correlations between the previous and current evaluation, some animals may have been re-ranked because of these updates.

For current EPD and percentile ranking of animals please visit Herdbook.org. For information, or if you have questions about these updates, please contact Lane Giess, ASA Geneticist, at lgiess@simmgene.com.

Our philosophy is simple:

Annual Production Sale Feb. 17, 2024

At the Ranch, Turtle Lake

RED & BLACK SIMMENTAL & SIMINFLUENCED YEARLING BULLS

OPEN FEMALES & THE ELITE EIGHT: 4 ELITE BREDS, 4 ELITE OPENS

BRED FEMALES. RED & BLACK BRED FOR PROFIT!

We have and will continue to breed cattle with calving ease, while maintaining reasonable and sensible growth. We select females that are moderate in size that will survive and produce in our unpredictable and harsh environment. In the commercial cow/calf business there must be a continued focus on the expense and maintenance of the cow herd. Profitability is not determined by income only, but a balanced approach of inputs and income.
